Citizenship Republic of Korea | **U.S. Permanent Resident**

Research Interests

Integrated photonics for optical interconnects and quantum technologies, with emphasis on low-loss, high-speed devices for co-packaged optics (CPO) and nonlinear optical processes for frequency conversion and quantum light generation.

Education

Kyung Hee University, Republic of Korea 2023.03 – 2027.02 (expected)
Bachelor of Science – Applied Physics / Bachelor of Engineering – Electronic Engineering

- GPA: 4.03/4.50 (Percentage equivalent: 95.1/100)
- Research Advisor: Prof. Donguk Nam (Seoul National University)
- Relevant Coursework: Semiconductor Engineering, Semiconductor Fabrication, Physical Electronics, Fourier Optics, Electromagnetism, Quantum Mechanics, Experiments for Quantum Information

Research Experience

On-Chip Quantum Frequency Conversion in LN-on-SiN Waveguides
Seoul National University (SNU), Q-SPIN Lab, Republic of Korea 2026.06 – Present
Project with Samsung Advanced Institute of Technology (SAIT)

- Designed an LN-on-SiN platform integrating directly bonded z-cut thin-film lithium niobate and laterally split-poled domains for efficient quantum frequency conversion via modal phase matching.
- Performed eigenmode and overlap-integral simulations (Ansys Lumerical MODE / FDE) to optimize phase-matched conversion, achieving a simulated normalized conversion efficiency of 350 %/W/cm².
- Preparing SiN waveguide fabrication and LNOI bonding at SNU ISRC FAB, including a LIGENTEC SiN foundry chip tape-out.

Micro-Ring Resonator Photon-Pair Sources Based on SFWM
KAIST, Q-SPIN Lab, Republic of Korea 2025.12 – 2026.05

- Studied silicon nitride microring resonators for high-purity photon-pair generation via spontaneous four-wave mixing (SFWM), targeting integrated quantum photonic circuits.
- Studied ring–bus coupling regimes and MZI, AMZI, and RMZI structures for integrated photonic circuits.
- Reviewed literature on high-purity SFWM photon-pair sources for discrete-variable photonic quantum computing.

Photonic Integrated Circuit Design and Foundry Tape-Out [Chip Layout]
KAIST, Q-SPIN Lab, Republic of Korea 2025.12 – 2026.02

- Contributed SiN microring designs for SFWM photon-pair sources to a LIGENTEC MPW tape-out.
- Performed coupling-gap sweeps to evaluate bus–ring coupling for the foundry design.
- Determined the critical-coupling condition by matching bus–ring power coupling to round-trip internal loss estimated from LIGENTEC-provided propagation loss.

High-k HfO_2/Al_2O_3 Gate-Stack FinFET Simulation for Space Applications
Undergraduate Graduation Research, KHU, Republic of Korea 2026.09 – Present

- Investigating HfO_2/Al_2O_3 gate-stack FinFETs using Sentaurus TCAD and Sentaurus Device.
- Planning total ionizing dose (TID) simulations over 100–800 krad(Si) to evaluate threshold-voltage shifts and leakage current.
- Planning comparisons of SS, DIBL, and Ion/Ioff across gate-stack compositions to assess radiation tolerance.

Patent

[1] D. Nam, D. Zhang, **C. Lee**, and T. Kim, "Laterally split-poled thin-film lithium niobate waveguide devices with modal phase matching and methods of fabricating the same", in preparation.

Academic Projects

Single-Photon Verification, Photon-Statistics Analysis Using HBT and GRA Experiments (A+) [pdf]
(Prof. Kwang Jo Lee) 2025

- Performed optical alignment of HBT and GRA setups and measured $g^{(2)}(0)$ to characterize the photon statistics of coherent, thermal, and SPDC-based light sources.
- Generated photon pairs via SPDC with a BBO crystal and verified nonclassical single-photon behavior through coincidence suppression.

Characterization and Parameter Extraction of Long- and Short-Channel MOSFETs (A+) [pdf]
(Prof. Seung Hwan Lee) 2025

- Measured transistor I–V characteristics using an MS TECH probe station and CLARIUS software, and extracted key parameters including Vt, SS, Ioff, GIDL, DIBL, and gm.
- Analyzed long- and short-channel device behavior, body-bias effects, and transistor scaling by comparing L = 10 μm and L = 0.35 μm devices.

Device and Process Simulation of CMOS Transistors Using Silvaco TCAD [pdf]
(Prof. Seung Hyun Lee) 2025

- Built a complete NMOS fabrication flow including oxidation, implantation, annealing, and metallization, and extracted key electrical characteristics such as ID–VG/VD, Vth, gm, and ro.
- Investigated short-channel non-idealities including DIBL, GIDL, and the effects of high-k gate oxides.

Design of a Multistage Analog Amplifier Using LTspice (A+) [pdf]
(Prof. Young Hyun Lim) 2025

- Designed differential, gain, and output stages, and performed AC/DC/transient analysis with pole-zero estimation.
- Optimized amplifier performance in terms of gain, bandwidth, and power consumption.

Teaching Experience

Instructor, Keystone Edu Academy, Suwon, Republic of Korea 2025.03 – 2025.09

- Taught middle school and high school mathematics for school internal examinations.

Mentor, Kyung Hee University, Republic of Korea 2025.02 – 2025.06

- Taught calculus and basic circuit analysis to freshman and sophomore students in Applied Physics and Electronic Engineering.

Instructor, Cheongchulearam Academy, Seoul, Republic of Korea 2023.03 – 2025.02

- Provided one-on-one instruction in mathematics for the Korean College Scholastic Ability Test (CSAT), covering calculus, geometry, and related topics.
- Improved students' CSAT mathematics performance from the 4th grade level (approximately top 40%) to the 2nd (top 11%) and 1st (top 4%) grade levels.

Activities

- Developed graduate-level ring resonator lecture materials for SNU ECE (2026).
- Attended the 2025 Quantum Information Winter School hosted by KPS and QISK (2025).

Additional Information

- Simulation Tools: Ansys Lumerical (FDTD, FDE, MODE), Silvaco TCAD, Sentaurus TCAD, LTspice.
- Fabrication and characterization: Thermal Evaporator, E-beam Evaporator, Ellipsometer, Probe station.
- Language: Native in Korean, fluent in English (C1-C2).
- Hobbies: swimming, café, running, basketball.

Referees

Prof. Donguk Nam
